Cleaning and Maintenance of Signs

Dansign's sign systems are designed to last for many years. Proper and regular cleaning and maintenance extend the lifespan of the signs.

How often the signs need cleaning depends on the following factors:

- Whether the signs are indoors or outdoors
- The extent to which the signs are exposed to dust and pollution
- How often the signs are touched by people (as is the case with signs featuring raised text and Braille – signs for the blind and visually impaired).

For indoor signs, regular window cleaner such as Ajax has proven to give the best results.

Clean the signs while preserving the text and logo. Use window cleaner and a clean, soft cloth for cleaning.

For outdoor signs and pylons, use detergent (sulfo) and water.
