dansign

Since the 1980s, we have developed, refined, and worked tirelessly to design the best signage concepts in the industry for customers both domestically and internationally.

To ensure you receive the perfect solution, we guide you from start to finish, working together to find the option that matches your needs and budget.

Quality, design, and durability are our top priorities, and you will be met with experienced and skilled professionals throughout every stage of consultation, design, production, and installation.

As a full-service provider in our field, our expertise and guidance ensure you receive the ideal solution tailored specifically for you.

We take pride in our longevity and the journey we've been on, guaranteeing that the traditions and experience we've built over the past four decades are reflected in every project we undertake, serving as an enduring stamp of quality on our work.

We are professional sign technicians, project managers, graphic designers, and installers with more than 40 years of experience in the industry.

Let us help you guide the way forward.

LockSign meets the need for securely locking signs to the wall.

This signage system, with its classic design, was originally developed for airports to ensure the demand for a high-quality signage system that could be securely locked to the wall—hence the name—and still allow easy updates as part of airport operations.

Over the years, LockSign has been sold worldwide and used in many types of buildings beyond airports due to its high quality, flexibility, and long durability.

LockSign features a timeless design and is made from extruded aluminum.

The material makes the system equally suitable for indoor and outdoor use. LockSign can be combined in countless ways and lacquered in any desired color. Additionally, the signs can be decorated with vinyl text, logos, graphics, or engraved letters/logos for both indoor and outdoor installations.
LockSign is available as wall signs, nameplates, office signs, wing signs, suspended signs, meeting room signs, desk signs, residential signs, and sign pylons.

The system also comes in the Paperflex format, allowing you to quickly and easily update information. This makes it ideal for areas with high wear and frequent updates, such as schools and residential buildings.

LockSign, anodized
